CURRENT APPOINTMENT

London School of Economics and Political Science (LSE)
Postdoctoral Fellow in Political Science and Public Policy, 2023-2025

AREAS OF SPECIALIZATION

Comparative Authoritarian Politics, Political Economy, Political Uncertainty, Mathematical Modeling, Game Theory, Inference from Observational Data with Statistics and Machine Learning, Contemporary China.

EDUCATION

University of California, Los Angeles
Ph.D., Political Science, Expected 2023

Committee: Barbara Geddes (Chair), Michael Chwe, Jeffrey B. Lewis, Victor Shih, & James Tong (In Memoriam)

University of Chicago
M.A., Social Sciences, 2014

The New School
B.A., Politics & Sociology, 2010

BOOK PROJECT

Title: *Investing with “Known Unknowns” in Low-Information Environments: How Firms, Political Uncertainty, and Autocracy Interact and Influence Contemporary China*

Abstract: Political uncertainty, defined as the lack of confidence with which government and policy outcomes can be predicted, has substantial adverse economic effects in democracies. Recently, political uncertainty has surged to unprecedented levels across the globe. At the same time, so too have autocracies in number and influence. Billions of people are subject to autocrats, who preside over resources that rival those in democracies. Nonetheless, there is comparatively little research on the economic effects of political uncertainty in autocracies. My dissertation contributes to that understudied area, with a focus on investment. I develop a theory that posits that political uncertainty in autocracies produces heterogeneous effects on investment, and identifies how institutions and other government interventions that transmit information moderate those effects. I model the theory to derive predictions for their signs and magnitudes. To test the predictions, I use evidence from China. To that end, I develop a measure of political uncertainty. I first locate an exogenous source of variation in political uncertainty, namely China’s institutionalized and routinized leadership transitions. I then exploit the Communist Party’s tight control over the news media to reveal the internal dynamics of their leadership transitions. This entails identifying informative patterns with statistical and machine learning-based analyses of Chinese archival news. With that measure, I leverage variation across China in investment and interventions by the Communist Party, as well as detailed accounting data on domestic firms coupled with convenient restrictions on foreign investment, to estimate the effects of political uncertainty on investment, and identify how they are moderated by institutions and other government interventions.
